Page margins are set at .25 on each side, and .50 on top and bottom, if your printer won't handle that, scale to fit. 75% should turn out fine.

The top and the bottom of this box are meant to be printed on card stock, and the liner should be printed on paper.

Score all folds, pre-fold before gluing. I used a glue stick.

Glue the tabs to connect the sides to each other first, then glue down the tabs on the top of the sides over the tabs connecting the sides together.

When you glue in the liner, start by gluing the bottom of the liner into the bottom of the box, then glue the sides in.
